

SONG OF THE DERELICTS.

From ocean to ocean we wander
From polar to tropical tide,
Alone and forlorn and forsaken,
The wreaths of our time-faded pride
Through the tumult and surge of the
tempest,
Wave beaten and battered we churn,
The ships of no name and no haven,
The ships that shall never return,
Up and down through the streets of the
cities
Go the men that are kin to lost ships,
The wreckage of old loves, time tattered,
The desolate ghosts of friendships.
Through the storms of the life-seas they
wander,
Wave tossed by the ceaseless unrest
Vagrants, shunned by their fortunate
brothers,
Till they drift to the Port of All Quest,
—Frederick Arthur Palmer, in The Jour-
nalist.

The Long Arm
of Coincidence.

"WONDER why you never married, Sir Edgar?"
Sir Edgar Winter lifted his
oars out of the water and
looked up at the dainty figure of his
companion, seated luxuriously among
the cushions of the boat.
"I did once think of marrying, nearly
twenty-five years ago," he replied
thoughtfully.
"Really! Oh, do tell me about it.
Or perhaps you would rather not?"
Sir Edgar smiled gravely.
"Oh, there are no painful memories
connected with the subject, I assure
you. I will tell you the story."
"Thank you. Women are always
interested in a love tale, you know. I
should like to hear it," Mrs. Els-
worth was at attention.
She was a pretty woman of about
thirty-five, the widow of a rich Lan-
cashire manufacturer. Some ten years
ago she had married a man nearly
forty years her senior, and had re-
joiced at the opportunity of exchanging
the somewhat dull existence of an
obscure country paragon for a life of
wealth and luxury. John Ellsworth
had been both proud and fond of his
young wife, and when, after five years
of happiness, his death took place he
left her sole mistress of his large
fortune.

But Madge Ellsworth had no intention
of remaining a widow. Her
wealth, together with rather more than
the usual amount of fact—so indispen-
sable for her purpose—had enabled her
to plant her foot on the first rung of
the social ladder, and she meant it to
aid her in mounting a good deal higher.
Chance had thrown her much lately
into the society of Sir Edgar Winter, a
handsome, well-preserved bachelor on
the right side of fifty. He had proved
to be—if not one of the most devoted—at
least an admirer of hers, and several
of her friends had remarked his
attentions. And Mrs. Ellsworth was
more than willing to receive those at-
tentions. Sir Edgar was a popular
man, much sought after, and the bar-
onetcy was an old one.

They were both at the present time
guests of Lady Popham at her charm-
ing house on the Thames, and Mrs.
Ellsworth had by a little strategy man-
aged to get Sir Edgar to take her on
the river for a moonlight row. Moon-
light on the water savored of sentiment
and romance, and even the coldest had
been known to thaw under such cir-
cumstances.

It was certainly a lovely evening.
The moon was climbing higher and
higher in an opal sky. A soft wind
gently rustled the overhanging trees,
and there was perfect stillness save
for the cawing of a few rooks and an
occasional slight ripple on the water.
Sir Edgar drew in the oars, letting
the boat drift slowly down the stream.
Then he lit a cigarette.

"It was just before I left Oxford,"
he began, "that I met Kitty Montgom-
ery. She used to sing and dance at
some theatre in London, and was all
the rage at the time. I don't remem-
ber much about her now, except that
she had very red hair. I thought her
an adorable creature, and fell violently
in love with her. I think Kitty was a
bit fond of me, too, and I was rather
proud of my conquest, as most of the
fellows of my time had lost their
hearts, and some of them would have
given a lot for even a smile from
Kitty Montgomery."

"Well, one Sunday I happened to be
spending the day on a friend's house-
boat up the river. He had invited a
lot of theatrical people, and Kitty was
among the number. Somehow during
the evening she and I managed to se-
cure a boat to ourselves, and we stole
away from the rest of the party. It
was a ripping evening, just the sort
of night to make us sentimental and
foolish. Moonlight, rippling water,
music in the distance—you know the
kind of thing."

Mrs. Ellsworth nodded. She under-
stood perfectly.
"Well, we were sitting in the stern,
and I had just begun to talk the usual
sort of nonsense, and was on the point
of asking her to marry me when a
party of Cockney trippers came sud-
denly round a bend in the river, and
before we had time to realize what
was happening they ran into us, up-
setting our boat, and turning us into
the water."

"How very dreadful! And so the
poor thing was drowned, was she?"
"Drowned! Not a bit of it," re-
turned Sir Edgar, shortly. "We both
scrambled ashore hardly a wit the
worse. They managed to rig us out
with some sort of dry clothing on
the launch, and then we had just time
to catch our train to Waterloo."

"Then you did not finish your pro-
posal?"
"No. One does not feel inclined to
finish a proposal in a railway carriage
among one's friends. We got pretty
well chaffed as it was."

"Of course, I quite understand,"
said Mrs. Ellsworth.
"I never had a chance of finishing. I
was obliged to leave England the fol-
lowing day, and, alas! for the con-
stancy of man, when I returned I had
completely forgotten her."

"How fortunate! I must congratu-
late you on your escape, Sir Edgar.
Such a marriage would have been little
short of madness. And what became
of the—the Miss Montgomery?"
"She married a publican shortly af-
terward."

"How very appropriate!"

"And they live—or lived—somewhere
in the neighborhood of the Blackfriars
road."

"Dear me! Quite the proper place,"
assented Mrs. Ellsworth.

"I think I owe a debt of gratitude to
the Cockney party," said Sir Edgar.
"Had they not run us down I should
certainly have made an utter ass of
myself."

"Yes, it's wonderful how things work
out sometimes. You were right not to
continue your proposal. I should take
an incident like that as a solemn warn-
ing. Providence certainly sent that
accident to prevent your folly, and you
were wise to profit by it. The ways of
Providence are indeed marvellous."

"Then I am exceedingly obliged to
Providence," replied Sir Edgar. Then
he dipped his oars into the water and
began to row slowly homeward. Mrs.
Ellsworth settled herself more cosily
among the cushions, and sighed softly.
It was a very effective sigh, and had
taken a lot of practice.

"What a pity it is," she murmured,
"that life is not all summer, and that
all evenings are not like this. It's ab-
solutely cruel to think that we shall
both be returning to London in a few
days."

Sir Edgar nodded and continued
rowing. Then he stopped suddenly.
"Mrs. Ellsworth," he said gently, "I
have something to say to you. I won-
der if you can guess what it is?"

She dropped her eyes and murmured
something unintelligible. Mentally
she was composing the announcement
for the "Morning Post."

"Madge," and he leaned forward and
touched her hand, "it is twenty-five
years since I proposed to a woman. I
have just told you how it happened.
To-night history repeats itself."

He rose as he spoke and attempted to
cross the boat to her side, but as he
did so he slipped, clutched at the seat
to save himself, missed it, and fell
backwards into the water. Mrs. Els-
worth screamed and jumped to the
side of the boat just as Sir Edgar was
emerging, weighed, however, capsize
the frail craft, and a minute later they
were both struggling in the river.

Fortunately they were quite close to
the bank, and had no difficulty in
reaching a place of safety. They ran
straight back to the house, entering it
by a side door, so as to avoid the rest
of the party; and except for their dam-
aged clothes they were none the worse
for their wetting.

Sir Edgar, when he had changed his
things, gave his friends an account of
the accident, and in the smoking-room
mused on the strange coincidence in
the turn of events.

Mrs. Ellsworth, on her part, before
her bedroom fire bewailed the unlucky
accident, and wondered what Sir Ed-
gar would have to say the next day.

Her doubts were, however, soon put
at rest the following morning by Lady
Popham, who entered her room as she
was breakfasting in bed.

"Isn't this provoking!" she ex-
claimed, as she waved a letter in her
hand. "Sir Edgar writes that he has
had an urgent message, and has been
obliged to leave for London by an
early train this morning. He left this
note for me to explain matters. Now
we shall be a man short. Isn't it a
nuisance? By the way," she contin-
ued, "he sent a message to you. He
hopes you are none the worse for last
night's accident, and wishes to apolo-
gize for his carelessness. He is sorry
he is unable to see you to say good-
bye."

Then, without noticing her friend's
expression, she went on:
"He told some one this morning that
Providence always arranges these
things for the best. What on earth
could he mean?"

"I am sure I don't know," said Mrs.
Ellsworth, crossly. But she fancied
she did know, all the same.—Norman
H. Oliver, in The Free Lance.

The Vanity Man.

"Why does a man always run his
hand through his hair when he takes
his hat off?" asked the observant man
"Did you ever notice that man will
invariably do this very thing? Is it
just a nervous habit? Is it vanity?"
It is an old habit. I have never known
a man who did not indulge his habit.
Even men who have no hair to run
their fingers through, men whose heads
are as bald as billiard balls, will brush
their hands over their heads when they
lift their hats. If the men simply
wanted to smooth their tousled hair,
of course, this would afford ample
explanation of the habit. But why
should a man who has no hair on his
head do the same thing? It is not
a sufficient answer to say that such a
man may have had a full suit of hair
at one time, and that it is simply a
matter of habit contracted under dif-
ferent conditions. As a rule men are un-
conscious of the fact. They do not
know why, how or when they run their
hands over their heads. But they all
do it just the same. Go into a court-
room, or at any place where men con-
gregate, and where it is necessary for
them to remove their hats, and watch
them. You will observe that every
man will go through the same per-
formance. It seems to be a perfectly
natural thing for them to do. My own
conclusion is that it is an evidence of
vanity. A man wants his hair to be
just so. Originally, probably it was
simply a matter of tidiness. But it
has grown into an act of vanity. The
lawyer, for instance, if he has enough
hair for the purpose, will want his hair
to have a tousled appearance. It gives
him a studious appearance, and leaves
the impression that he has been strug-
gling with the books. Whatever the
reason the habit is a curious one, and
one which seems to be deep-rooted in
the masculine nature.—New Orleans
Times-Democrat.

The Generous Man.

Joseph Grouard, of Spencer, Mass.,
announced recently that he would give
receipts in full to all his debtors who
applied, provided they were unable to
meet their obligations. "No matter
whether it is \$10 or \$100 or \$1000," he
declared, "any man who says he can-
not pay it shall have a receipt. I want
to feel kindly toward all the people
and not have them burdened with any
debts to me." But it has turned out
that no man owed him a single cent.—

arouses the activities. Darkness is sup-
posed to produce drowsiness.

UNSPEAKABLE CRUELITIES
WHICH CHRISTIANS SUFFER
IN THE LAND OF THE SULTAN

In the land of the Sultan of Turkey
there seems to be no falling off in the
unspeakable cruelties practiced on the
Christians who have been forced to
take up their cross there. Month after
month come reports of new cruelties,
and the truth of them cannot be doubt-
ed. Europeans are gradually working
their way into more remote provinces,
and the conditions they find are al-
most beyond belief.

Especially sordid and miserable are
the lives of the Bulgarian and Albanian
Christians, and they suffer most at the
hands of fellow Bulgarians or Albanians
who have accepted Islam. No
crime is too brutal for the hands of these
fiends. They know no mercy,
and moral law is for them a thing
apart.

In no country in the world has tax-
ation been reduced to such a science,
yet because of the treachery of his
officials the Sultan is always poor. The
tax list for the Albanian peasant leg-
ions with the military tax. The poor-
est pays \$8.50 a year to escape military
service. For every male child the
family has to pay \$1.50 in addition.

Every one remembers the protest
which went up in this country over the
income tax. They have such an in-
stitution in Turkey, but it operates in a
peculiar Turkish way. The tax is
collected from those who have incomes,
and then the collectors go to those
who have none. They pay at the same
rate and the collector does the esti-
mating.

There is besides a road tax which the
male subjects begin to pay at the age
of twelve. Of course, very little of the
money is ever expended on the roads.
A tenth of the farm products are sup-
posed to be turned over to the Gov-
ernment, but the farmer is usually

says the farmer, handing over some
gold pieces.
"Well, we are old friends," says the
officer. "I will do you this favor."
Then he goes to another house and re-
peats the operation. When he has col-

TURKISH TROOPS ON THE MARCH.

lected horse money from a dozen farm-
ers, does he go to a market and buy a
mount? Not on his black Turkish soul!
He goes to a man too poor to pay and
seizes a horse.

The worst cruelties fall on those who
have wandered into other lands to
make a living, and who return to their
homes for a brief visit at holiday times.
They always bring back a small store
of savings, and generally travel in par-
ties under the false idea that it will
give them greater protection. The

An Old Double-
Barreled Cannon.

In one of the city squares of Athens,
Ga., stands an interesting relic of the
Civil War—what is probably the only
double-barreled cannon ever made. It
was designed by a resident of Athens
for use in the Confederate service, the
idea being to discharge a projectile
from each barrel simultaneously, the
projectiles to be connected by a chain.
No chain was found to be sufficiently
strong, however, to withstand the
strain, and the weapon was never
tested in actual warfare. The cannon
is made of cast iron and was molded
at one of the local foundries. It is of
three-inch calibre, having a diameter

A DOUBLE-BARRELED CANNON.

across the muzzles of eight inches and
across the barrels of thirteen inches.
While it is fifty-five inches in length,
it is provided with what is familiarly
known as a "touchhole" in the breech,
connecting with both barrels, so that it
could be discharged by lighting a fuse
if desired. The idea of the inventor
was to connect the balls by a chain
several feet in length, the ends of the
chain being fastened into each, by
staples. Chain-shot was often used in
naval battles to carry away the rigging

PEASANT WOMEN DISFIGURED BY AN INDELIBLE CROSS BETWEEN THE EYES.

(They gave promise of beauty when young, and were so marked by their parents in order to keep the Turks from kidnapping them for the harem. The cross disgusts the Turk.)

forced to hand over an eighth or a
seventh of his entire crop, and, in the
case of wheat or similar grain, to
thresh the tax gatherer's share. The
privilege of collecting this land tax is
usually sold outright by the Govern-
ment, and the one who purchases the
gathering privilege profits by the ex-
tortion.

As if the burden of taxation were not
enough, the additional burden of un-
limited bribes is put on the poor sub-
ject. They have a line of bribes in
Turkey that would make a political
combine lash its tail with envy. One
instance will show how this works out:

A farmer managed to save enough
money for a new house. He paid one
bribe for a permit to pull down the
old one, and another for a permit to
erect the new structure. The building
was completed, and the tax collector
came. The collector put an overvalua-
tion on the new house, and refused to
remit the tax on the one which had
been torn down. It meant another
bribe, and the farmer preferred to give
it rather than pay taxes on two houses.

The mounted police, who get the
equivalent of \$4 a month from the
Government, and have to furnish their
own horses, are among the most pro-
picious people in the country. They go
to the stable of a well-to-do farmer
and take out his best horse.

"I beg of you to leave the animal,"

Turks lie in wait for these homecom-
ing pilgrims, and in lonely places on the
road they are ambushed. If the party
is small they are shot down first and
robbed afterward; if large, the holdup
is carried on more humanely. The
unfortunates are surrounded by an
armed band, one of whom advances
and places a rug on the ground. On
this the travelers place their money,
and woe to the man who does not give
up his last cent.

Even more terrible is the fate of
Christian women and children under
this travesty of Government. No
woman is safe from the all powerful
Turk, and from insult and dishonor or
kidnaping at his hands there is no
trustworthy recourse. Albanian fathers
and mothers know this, and in their
very extremity they have found one
safeguard. As soon as a Christian
girl begins to show signs of feminine
beauty, an indelible cross is tattooed on
her forehead between her eyes. The
sight of the cross disgusts the crescent
loving Mahometan, and the girl once
marked in this way can never become
a desirable subject for the harem.—
New York Tribune.

An Extraordinary Fact.

It is an extraordinary fact, says the
Syracuse Herald, that pictorial adver-
tisements of plays, vaudeville and the
like are flaunted on bill-boards, which
if reproduced in a book or newspaper
would cause the publication to be ex-
cluded from every respectable house-
hold. In other words, illustrations
that would be put under the ban if

TURKS BRINGING IN ALBANIAN PEASANTS HANDCUFFED TO GET HER.

cries the farmer; "he is not fitted for
your purpose."
"The Government ordered me to take
him," declares the officer.
"I will reward you for leaving him,"

printed in a book or newspaper are
exposed, in a magnified form, to the
gaze of children in the public places
of the city. The city authorities should
find some way to put an end to the
practice. They have ample power to

It was then mounted upon its pre-
carriage, and placed in the park for
an ornament.—Scientific American.

Hospitable Pat.

A certain sportsman took a shooting
trip in Ireland. He was assured that it
was a good sporting territory. When he
arrived this was corroborated by the
head keeper, a typical Paddy. The
latter declared that the country fairly
bristled with pheasants. So they went
out after them and in a day put up
five. The next day the tenant inquired
after partridges and was told the same
tale; the shoot yielded about six.
Woodcock, grouse, capercaillie, every
kind of game, Paddy told "his owner,"
were as thick as leaves in autumn, but
they could not be found. At last he
said angrily, "Are there many rhino-
ceroses on the estate?" "Shure, yer
owner," drawled Pat very slowly, "not
many, not many," but brightening up,
"you may put up two or three round
the lake in the summer." Long before
the summer, of course, the tenancy
would be at an end. "You confounded
rascal," roared the tenant, "what do
you mean by telling me all these lies?"
"Shure," said Pat, with a true Hil-
bernian grin, "an' wouldn't I be givin'
yer 'donner a pleasant answer?"—Lon-
don Tatler.

Over 500 infants are killed every year
in London by being overlaid in bed
by their parents.

THE SCHOOL GARDEN

Value of This Nature Study Labo-
ratory—The Practical Knowledge
as Well as Artistic Conceptions
Which It Affords.

DEFINE the school garden as a
garden that performs some educa-
tional function in the school with
which it is connected. It has a
garden laboratory—a nature study lab-
oratory. It does for the children out-
doors what the chemical laboratory,
the carpenter shop and the kitchen
laboratory do indoors. It trains the
eye and the hand along with the in-
tellect, and at the same time gives
pleasurable employment and physical
exercise in the open air and sunshine.
To many pupils in the city it opens up
a whole new world—nature's life ro-
mance, a divine pastoral abounding in
amusing little comedies and the most
intensely interesting tragedies—the
struggles for existence—all this at a
time when every impression made upon
the child mind leaves an indelible
stamp. And not only does it arouse
interest in the many phenomena of
nature thus brought under the directed
observations of the child, but it also
gives zest to many otherwise dry ex-
ercises that the skilled teacher correlates
with it.

KINDS OF SCHOOL GARDENS.

Two fairly distinct types of school
gardens are found. In one the ornamental
features predominate. The child-
ren assist in planting the school
grounds with wild flowers and shrubs,
or cultivated flowers, ornamental plants
and trees, or various combinations of
native and introduced plants. Ordinarily
in gardens of this type the aesthetic
features are emphasized, though not
always to the exclusion of other valu-
able instruction. The children may
learn, to a certain extent, the prin-
ciples of plant growth, the reasons for
pruning and grafting trees, the best
methods of combating insect pests and
fungus diseases of flowers, shrubs and
trees, and many other practical details
in maintaining pleasant home surround-
ings.

In the other type of school garden—the
vegetable garden—we find the econ-
omic element predominating. Child-
ren are frequently allowed to plant
flowers in connection with vegetables,
but this feature of the work is usually
incidental to the instruction in growing
useful plants. Usually the garden is
divided into small plots, from four to
ten feet wide by six to twenty feet
long, and one or two pupils are made
responsible for the care of each plot.
Here they plant lettuce, radishes, beans,
potatoes and other farm and garden
vegetables, learn to distinguish them
from the weeds that threaten to choke
them out, become familiar with their
habits of growth and methods of re-
production, discover numerous insect
enemies and other pests that require
great ingenuity to eradicate, and grad-
ually acquire a nomenclature that adds
greatly to the stock of words in their
growing vocabulary.

LANDSCAPE EFFECTS.

Such gardens do not lend themselves
to the realization of landscape effects,
but furnish many valuable lessons not
to be acquired in the ornamental gar-
den, where, as a rule, all the pupils
work together. Among other things
they develop a sense of ownership, and
awaken a greater personal interest.
With this sense of ownership comes a
growing regard for the property of
others. It has been found in the educa-
tion of incorrigible boys that at-
taching to each boy a plot of ground
upon which he can raise what he will
and enjoy the fruits of his labor has a
powerful influence in overcoming the
tendency to indulge in petty thieving.
Furthermore, the few experiments in
school garden work that have been
carried on long enough in this country
to give tangible results indicate that
children who have engaged in work of
this kind at school acquire a whole-
some respect not only for the individual
property of others, but for city prop-
erty and other corporate property, for
the shade trees in the streets and the
shrubbery and flowers in parks.

The individual plot system, also,
more than any other fixes personal re-
sponsibility. There is no chance to
shirk it. If any plot shows neglect the
teacher knows where to fix the blame.
If another shows excellence in design
or painstaking effort, the teacher
knows where praise should be be-
stowed. It has been found in schools
where this system has been tried that
to deprive a neglectful pupil of his
plot and give it to some one else has
been one of the strongest incentives
to continuous and painstaking effort.
After a pupil has prepared his ground,
sown his seed and bestowed some little
care upon the plants that have come up
he very much dislikes to have the
fruits of his labor enjoyed by someone
else.

DEVELOPMENT OF THE MOVEMENT.

School gardens of the two types men-
tioned are mostly modern institutions.
No concerted movement for their es-
tablishment dates back more than thirty-
five years. Aside from Germany, where
two or three states gave encour-
agement to the establishment of school
gardens, over eighty years ago, Austria
and Sweden were leaders in the move-
ment and were practically contempor-
aneous in giving official encouragement
to it. The Austrian imperial school
law of March 14, 1860, prescribed that
"where practicable a garden and place
for agricultural experiments shall be
established at every rural school." In
Sweden, seven months later, a royal
circular was published which required
school gardens averaging from seventy
to eighty square yards to be appropri-
ately laid out. In both countries the
movement had rapid growth. In
Austria the number of school gardens
in 1868 was estimated to be over 18,000,
and in some of the Austrian provinces
there is not a school without a garden.
In Sweden the number of school gar-
dens in 1894 was 4070.

BELGIUM AND SWITZERLAND.

In Belgium, since 1871, a law has
been in force requiring that each school
have a garden of at least thirty-nine
and one-half square rods, to be used
in connection with instruction in botany,
horticulture and agriculture. In Swit-
zerland an active campaign for the es-

tablishment of school gardens was
gun in 1881 by the Swiss Agricultural
Society, and about 1885 the Federal
Government began to subsidize school
gardens and to offer prizes for plans
and essays on the subject. School
gardens are maintained in connection
with normal schools and in that way,
the teachers receive special training
which enables them to make the best
use of these important institutions. In
Belgium a remarkable impetus was
given to vegetable gardening, a matter
of great importance in that densely
populated country. In Switzerland, ac-
cording to a recent consular report,
one can see flowers, vegetables, fruit
trees or shrubbery planted "on every
foot of ground—on the front, sides and
rear of houses."—Richard J. Crosby, in
Boston Transcript.

NEW JAPANESE INDUSTRY.

Ladies' Demands Supplied in the Land
of the Rising Sun.

It is perhaps hardly recognized how
formidable a competitor Japan is be-
coming to the continental nations in
supplying some of the items of ladies'
daily demands. It is now several
years since a great West End firm in-
troduced the luxuriously soft and com-
fortable quilted dressing gowns and
jackets from the land of the rising
sun, and by supplying English patterns
as to size and shape to the Japanese
workers were enabled to offer the home
customer what she wanted in these
directions, allied with the charms
of color and embroidery that are dis-
tinctly Eastern.

London is more and more relying upon
Japan for the straw platts and braids
which go to make the smart and inex-
pensive hats and toques now appearing
so conspicuously in the milliners' win-
dows, and this year a stride forward
has been made in sending over what
are technically known as "chiff
fancies," which have hitherto been al-
most exclusively supplied by Italy.
And now there is a new branch of en-
terprise to be noted with regard to
the more dainty features of our table
linen, and Japan is prepared to give us
lunch, sideboard and afternoon tea
cloths, serviettes and the like with the
ultra-fashionable adornment of
drawn-thread work in the most charm-
ing variety.

Hitherto the work has been done
upon the native cotton cloth, and the
first essential toward bringing it into
accordance with western table re-
quirements was to supply instead the
finest Irish flax linen. This the deft
feminine fingers of the Japanese work-
ers found to be admirably suited to
their peculiar methods, and upon it
they are executing work that not only
rivals the finest Sicilian examples in
this direction, but has characteristics
entirely its own. They employ several
forms of stitch quite unknown in Eu-
rope, and in the fineness of their effect
obtain results approaching to that of
pillow lace.

Every one is familiar now with the
Tenerife linen work, and the outlines
of this are often reproduced in that of
Japan, but critics are inclined to prefer
the intricate geometrical and scroll de-
signs that seem to be indigenous. Al-
though aerial and delicate in appear-
ance, the work washes well, provided
that reasonable care be exercised, and
is indeed sent into this country washed
and ready for immediate use.

Perhaps, to the ordinary buyer, the
greatest recommendation that these
charming accessories could have is
their cheapness, as compared with
what the price would be of items of
European origin on which a tenth
part of the patient hand labor had
been expended. For a toilet firm, it is pos-
sible to buy a toilet cloth or centrepiece
or even less at a retail price, and at al-
ways with delightful and even elaborate
ornamentation of this kind at the ends
or corners, and long luscious open-
worked hemstitching. Especially dainty
are (tiny napkins for afternoon tea,
which are a real boon when hot but-
tered cakes are served. At present the
length of time that must elapse be-
tween sending an order from this coun-
try and receiving the finished work
has militated against utilizing it for
dress trimmings, but should the present
season witness, as is expected, an un-
precedented popularity for Belfast linen
gowns, it is probable that something
of the kind may be attempted for next
year's wear.—London Telegraph.

Neglected Etiquette.

That the society young man in Eng-
land is as lax in matters of etiquette as
his American cousin appears from a
complaint in a London weekly. The
writer says: "I notice a quantity of
books on etiquette have lately appeared,
so that a certain number of people
must still concern themselves with its
laws and edicts. On the whole, how-
ever, a decided free and easiness has
begun to prevail in society. After-din-
ner calls and card-leaving generally
are almost entirely neglected by young
men, and the efforts of hostesses to
entertain meet with scant encourage-
ment. A branch of etiquette in which
men who have come from our smart
schools are sadly deficient in the art
of letter writing, of accepting or de-
clining invitations and addressing la-
dies. Every foreigner can write a well-
expressed, grammatical letter, but our
English young man of smart society is
strangely illiterate. He learns neither
essay writing nor English composition
at Eton and Harrow, and this forms
one of the greatest drawbacks to the
political career of an otherwise prom-
ising young man."

The Reporter.

One of the sad features of civil and
military life is the unpreparedness of
men in the presence of the newspaper
reporter. Without the reporter there
might be papers, but not newspapers.
He is a necessary evil, if he be any
kind of evil. Those who fight hardest
against him and oppose his mission
are the very ones who at some future
day need him most, and it is they who
will work most strenuously to use him
for their purposes. It gives me pleas-
ure to say that we of the Fourth Estate
are gradually educating the public in
the art of receiving newspaper men
and treating
